

Example Caller ID Data : Caller-ID Convertor

The following is an example of the Caller ID data generated by a Comet or Meteor Plus when connected via the Caller-ID Convertor to an incoming telephone call with DTMF standard caller ID:

Hex	Dec (ASCII)	Description
80	128	Message Type
0D	13	Message length (ex Checksum)
02	2	Call Number Parameter
0B	11	Parameter Length
30	(0)	0
31	(1)	1
39	(9)	9
30	(0)	0
34	(4)	4
36	(6)	6
35	(5)	5
39	(9)	9
35	(5)	5
38	(8)	8
33	(3)	3
24	36	Checksum

For more information on the Caller ID message data structure components, please refer to the Meteor Plus Manual/Developers guide (available for download from the Crucible Technologies website: http://www.crucible-technologies.co.uk/downloads/meteor_plus_manual.pdf)
